SAMPLE JOB DESCRIPTION – AI ENGINEER

Position

Junior AI Engineer

Job Summary

We are looking for a Junior AI Engineer to build and integrate AI-powered applications using machine learning, Generative AI, RAG, and LLM technologies.

Required Skills

Python, machine learning fundamentals, NLP basics, SQL, REST APIs, Git, data preprocessing, and problem-solving.

Preferred Skills

RAG, vector databases, LangChain, LangGraph, Hugging Face, ChromaDB or FAISS, prompt engineering, Docker, and cloud deployment.

Generative AI Responsibilities

Develop document-based question answering systems, integrate LLM APIs, create prompts, evaluate generated responses, and improve retrieval quality.

Project Responsibilities

Build prototypes, test AI workflows, document technical decisions, and collaborate with software and data teams.

Education

Bachelor's degree or current undergraduate study in Computer Science, Artificial Intelligence, Data Science, Information Technology, or a related field.

Good Candidate Profile

Candidates should demonstrate practical AI projects, Python programming ability, understanding of RAG and LLM concepts, and willingness to learn new AI technologies.
